CAREER OBJECTIVE

To obtain a challenging position in a reputed organization where I can utilize my technical skills, enhance my knowledge, and contribute to the growth of the company while continuously learning and improving myself.

PROJECTS

CONVERT E-BOOK TO AUDIO

This project is a *Flask-based web application* designed to convert PDF e-books into high-quality audio files (MP3) for easy listening. It features a simple interface where users can upload PDF documents and select from over 13 supported languages, including English, Tamil, Hindi, and Spanish. The system leverages PyPDF2 for text extraction and the gTTS (Google Text-to-Speech) library to generate natural-sounding narrations.

ONLINE SECURE EXAMINATION

This project is an AI-powered Secure Online Examination System built with Python (Flask) and MySQL to ensure academic integrity. It features RSA/AES encryption for exam content, OTP-based email verification, and an admin panel for test management. The system implements real-time proctoring via face tracking, noise detection, and tab-switch monitoring to prevent cheating. Automated scoring and instantaneous digital certificate generation are provided to successful candidates upon completion.

WEB-BASED DRAWING

Developed a full-stack digital drawing web application using Flask and the HTML5 Canvas API, featuring custom-built tools like a flood fill algorithm and a robust undo/redo system. I implemented a secure backend to save user creations as PNG files, enabling persistent storage, gallery browsing, and the ability to re-edit previous work. The platform integrates interactive SVG coloring templates and a responsive toolbar for real-time brush, shape, and color adjustments.
